Professional Summary

Aspiring Data Analyst with hands-on experience building end-to-end analytics pipelines — from data cleaning and EDA to cloud-based querying (AWS S3, Athena) and Power BI dashboarding. Skilled in statistical analysis and hypothesis testing, including A/B testing and RFM-based segmentation, to turn raw data into business decisions. Proficient in Python, SQL, Pandas, NumPy, and Power BI, with a strong foundation in experiment validation, KPI reporting, and data storytelling.

Technical Skills

Programming: Python, SQL
Cloud & Databases: AWS(S3/Athena), PostgreSQL, MySQL
Data Analysis: Pandas, NumPy, Excel, Data Cleaning, Data Validation, Feature Engineering, EDA
Visualization: Matplotlib, Seaborn, Power BI
Concepts: A/B Testing, Cohort Analysis, Data Storytelling, Statistical Analysis

Projects

E-Commerce Cloud Analytics Pipeline  *AWS(S3/Athena), SQL, Power BI*

- Cleaned and split a 34,500-record dataset into normalized Customers, Products, and Orders tables using Python, structuring it for a star-schema-style data model.
- Uploaded structured tables to AWS S3 and created Athena tables to run intermediate-to-advanced SQL queries, analyzing purchasing patterns, category performance, and regional trends.
- Modeled the Athena output in Power BI to build a KPI dashboard, visualizing insights such as 56.6% revenue concentration in Electronics and a 5.5% return rate to support business decision-making.

Landing Page Conversion Optimization using A/B Testing  *Python, Pandas, NumPy, SciPy, Matplotlib*

- Analyzed 290K+ user interaction records to evaluate a redesigned landing page, validating experiment integrity by checking traffic split and removing mismatched assignments.
- Conducted a two-proportion Z-test and confidence interval analysis to compare conversion rates between two test groups.
- Found no statistically significant improvement in conversion rate, recommending against full deployment over misleading short-term variation.

Customer Segmentation Analysis Using RFM  *Python, Pandas, NumPy, Matplotlib, Seaborn.*

- Performed RFM analysis on 250K+ transaction records, scoring customers on Recency, Frequency, and Monetary value into VIP, Loyal, Regular, Potential, and Churn Risk segments.
- Flagged customers inactive 90+ days as churn risks and recommended re-engagement campaigns, while flagging VIP/high-frequency customers for loyalty targeting.
- Found middle-aged and senior customers contributed the highest revenue share, informing a recommendation to prioritize this segment in premium targeting.

Experience

Data Analytics Trainee, Coding Blocks *Jun 2024 – Aug 2024*

- Owned data cleaning and preprocessing workflows in Python (Pandas, NumPy) for analysis-ready datasets.
- Drove EDA using Excel pivot tables and charts, presenting findings directly to mentors and team.
- Converted raw data into business insights to support data-driven decisions.

IT Support Engineer (L1/L2), Loop Matrix — Defence Expo 2022, *Oct 2022 – Nov 2022*

- Led setup of network infrastructure supporting 150+ systems for a national-scale event.
- Diagnosed recurring hardware and connectivity issues, identifying patterns to speed up troubleshooting.
- Delivered technical support directly to teams from the Ministry of Defence, HAL, Indian Army, Navy, and Air Force.

Education

Shri Ramswaroop Memorial University, B.Tech in Computer Science *Aug 2022 – Jun 2026*
City Nobel Jankipuram, Intermediate *Apr 2019 – Jun 2021*
